

changes as requested by examiner per MPEP 1302.04. Attachment entered as examiner's amendment per MPEP 1302.04 as authorized by atty. Paul Horstmann on 07-15-2010. /MDH/ /07-16-2010/

71-75. (Cancelled).

76. (Amended) A method for determining whether an originator of an access to a computer-based system is a human being or a computer-based program imitating a human being, comprising:

generating a computer-based message defining a human test which when rendered by another computer-based system using an output device presents a stimulus perceptible by one or more human senses such that the stimulus depicts an object that exists in the real-world and a question pertaining to the object wherein the question is selected to test human knowledge regarding a capability of the object;

real-world

transmitting the computer-based message to the originator and receiving a computer-based message containing an answer to the question from the originator and determining whether the answer is correct.

insertion of "real-world" before "capability" in the eleventh line of Claim 76 authorized by atty. Paul Horstmann on 07-15-2010. /MDH/ /07-16-2010/
